Coloplast History

Coloplast has a long history of providing quality, innovative products to support endourologists and their patients. Our story began in 1893 in Sarlat, France where Porges Laboratories specialized in the manufacturing of catheters and medical devices for urology. Today, the Coloplast endourology brand is recognized globally for delivering differentiated and clinically-focused disposable stone management products that help make life easier for people with intimate healthcare needs.

Our business includes Ostomy Care, Continence Care, Wound & Skin Care, Interventional Urology and Voice & Respiratory Care. We work closely with you to help patients who have intimate healthcare needs. We listen to your needs and respond with products that help make their lives easier.

Present throughout Europe, we are always by your side.

Our customer service and sales representatives are available whenever you need them to help you find the right solutions to your specific requirements.

Feel free to visit our website to discover all our solutions: www.coloplast.com

Coloplast Professional

Sharing Our Expertise, Empowering Your Success

Our educational programs for doctors offer a structured learning path opportunity to enhance knowledge, skills, and continuous development. These programs range from continuing medical education training courses, e-learnings, and hands-on workshops to masterclasses. By joining our European urologist network, you will not only enhance your technical expertise but also play a major role in transforming patient care.

Explore the valuable benefits and opportunities these programs can offer to enhance your practice:

Knowledge Enhancement

- Up-to-date Information:
 - Access the latest research, EAU Guidelines, advancements in endourology, and treatments for Men's and Women's Health.
- Specialized Expertise: Deepen your knowledge in:
 - Endourology, laser treatments for kidney stones, and BPH/soft tissue enucleation.
 - Erectile restoration/dysfunction, stress urinary incontinence, and pelvic organ prolapse.
- · Procedure-Specific Learning:
 - Ureteroscopy: Removal of kidney stones and treatment of ureteral issues.
 - Percutaneous Nephrolithotomy (PCNL): Treatment for large kidney stones.
 - Endoscopic Tumor Resection: Management of bladder and upper tract urothelial cancer.
 - Minimally Invasive BPH Treatments: Techniques such as ThuLEP (Thulium Laser Enucleation of the Prostate).

Skill Development

- Clinical Skills: Improve diagnostic, surgical, and therapeutic techniques.
- Soft Skills: Enhance communication, leadership, and teamwork abilities.
- **Technological Proficiency:** Master tools such as robotic surgery, telemedicine, or electronic health records.

Improved Patient Outcomes

- Evidence-Based Practice: Apply the latest findings to provide high-quality care.
- Holistic Approach: Better understand patient needs through advanced diagnostics and treatments.
- Reduced Errors: Minimize mistakes with updated safety protocols.
- Faster Recovery Times: Leverage minimally invasive methods to reduce hospital stays, postoperative pain, and complications.
- **Precision Treatment:** Use endourology procedures for highly targeted interventions, minimizing risks to surrounding tissues.
- Patient Satisfaction: Achieve better outcomes, less scarring, and quicker recovery, enhancing patient trust and satisfaction.

Networking Opportunities

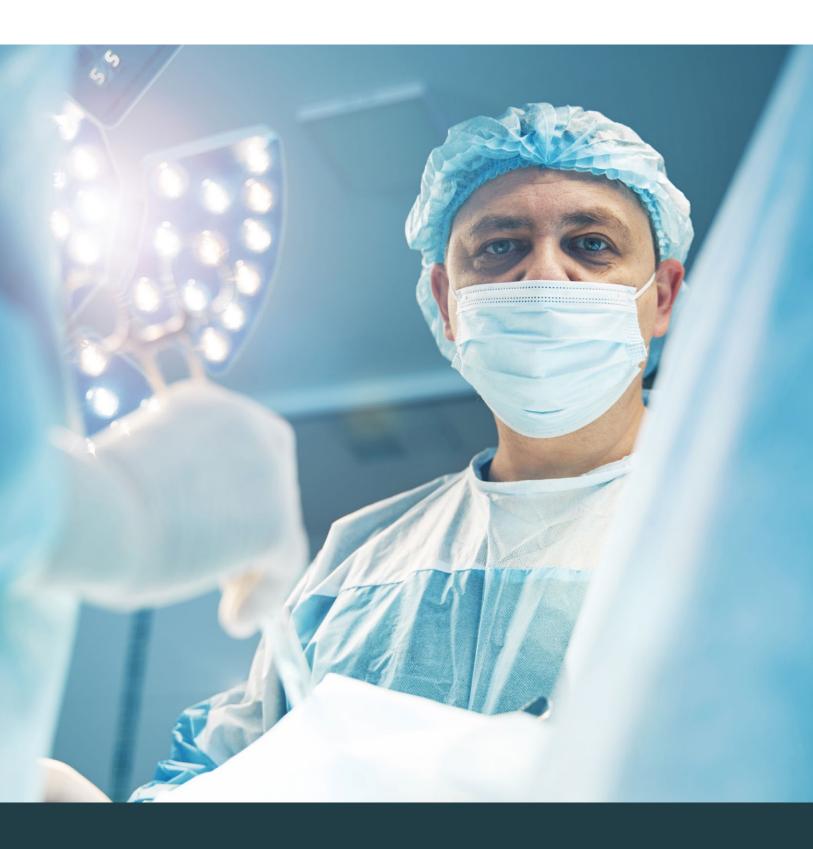

- Peer Collaboration: Interact with other professionals to share knowledge and best practices.
- Mentorship: Learn from leading experts and mentors in the field.
- Global Connections: Join international conferences, research collaborations, and global medical forums.

Research and Innovation Opportunities

- Cutting-Edge Advancements: Contribute to innovations in laser technology, imaging, and robotic-assisted surgeries.
- Pioneering Research: Help develop improved diagnostic methods, surgical techniques, and urological devices.
- **Teaching and Mentorship:** Train the next generation of urologists and endourologists.
- Publication and Recognition: Publish studies and share your expertise at international congresses.

Coloplast TFL Drive

Power made Safer*

Laser System

Coloplast TFL Drive is a 60W laser system intended for multiple indications: Lithotripsy, BPH and Soft Tissue. It's the only TFL laser to have safety monitoring thanks to preset safety ranges and defined power limits. Intuitive Interface are designed by surgeon for surgeons and aiming to adapt power to the size of the fiber for specific clinical condition.

The Coloplast TFL Drive interface allows you to adapt energy, frequency and power values to the size of fiber used.

The TFL technology is the latest cutting-edge laser technology, bringing highly effective intra-operative performance. Finer and Faster dusting capabilities combined with less stone retropulsion of TFL allow decrease treatment time.

Coloplast TFL Drive in Key Points

All-in-one Solution

- Stone
- BPH
- Soft Tissue

Intuitive Interface

 Defined aiming at optimizing the effectiveness

Ergonomic design

- Easy transportability
- Limited footprint

Efficiency

- Finer and faster dusting capabilities
- Less retropulsion
- · High ablation speed

Ordering Information

Order Ref.	Description
TFLD01	Coloplast TFL Drive Laser including: Coloplast TFL Drive Laser System - Pedal Double footswitch - Optical blast shield - Safety goggles (x2) - Power cord - User manual - Accessory case containing: Fiber stripper for optical fibers 300 to 1000µm, Fiber stripper for optical fibers 100 to 400µm, interlock connector, optical blast shield, and key for use with Coloplast TFL Drive.

Fibers

TFL is suitable with use with the smallest fiber $150 \, \mu m$, allowing to free up space inside the ureteroscope working channel to increase irrigation and thus visibility.

	Order Ref.			
Fiber size	Single use	Reusable 5x	Reusable 10x	Ordre Unit

CoralView - Single-Use

Digital Flexible Ureteroscope*_

- The CoralView is used by physicians to access, vizualize and perform procedures in the urinary tract.
- Each unit is supplied with a Leak resistant and rotable T-valve.
- 120° field of view, 3-50mm depth of view.
- Accurate color reproduction.
- · Autohold technology self-locking lever.
- Box of 5 Sterile.

Insertion tube rotation fonction by simply turning the rotation ring

7.5 Ch/Fr super slim shaft for 6.7 Ch/Fr distal end ureteroscope only

Order Ref.	Description	Distal end outer diameter	Nominal insertion tube outer diameter	Maximum insertion portion width	Deflection mode
000P1U10B	CoralView Ureteroscope – Standard	7.2 Ch/Fr	8.25 Ch/Fr	2.9 mm	Standard

Dormia® DualPerc

A unique concept_

Dormia® DualPerc offers dual functionality thanks to its quick and easy switch between flexible and rigid configurations.

When used with both configurations, the device is designed to remove stones through a unique percutaneous access, reducing multiple renal punctures and/or the need of additional devices.

Rigid configuration

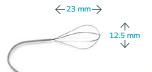

Working length: 35 cm

- Super elasticity and maximum shape memory
- 4 wires cage for capture and retrieval of stones of different sizes and volumes
- Tipless design for direct contact against tissues with minimal trauma
- Specific design for adapted opening in small cavities

Stainless-steel cannula

- Rounded distal tip for smoother contact with the tissue and instruments, designed to minimize trauma
- Radiopaque tube for accurate visualization under x-ray

Flexible configuration

Full length: 64 cm 3 Ch/Fr flexible sheath

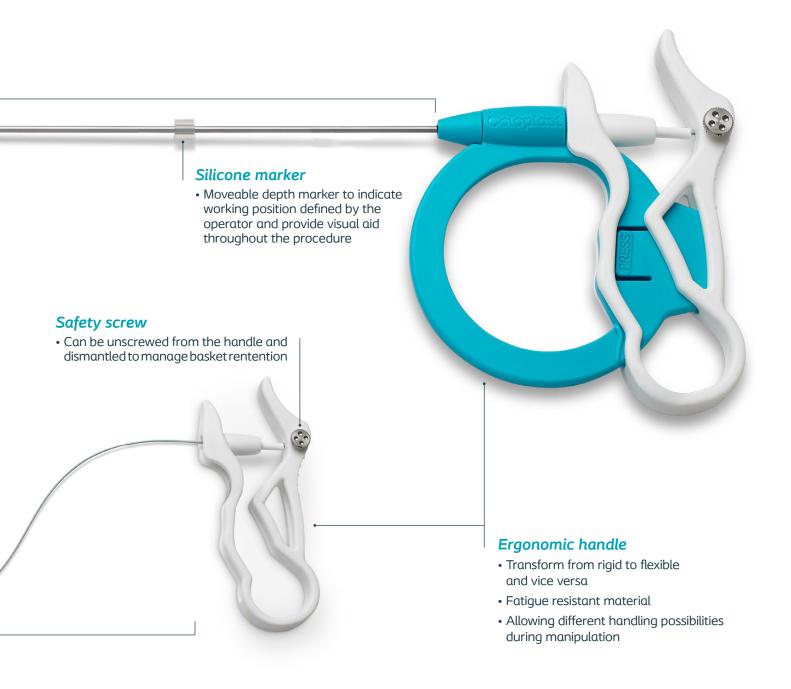

Flexible mandrel

- Diameter of the sheath and mandrel permits full deflection of the flexible cystoscope during stone extraction
- · Working length designed for optimal compatibility with flexible cystoscope

ReTrace®

Ureteral access sheaths_

- Radiopaque ring.
- Hydro-coated reinforced sheath.

· Connector: ergonomic shape.

K-Box®

The training model_

Unique 3D model for flexible ureteroscopy simulation and training.

It allows to learn:

- To manipulate the scope.
- To manipulate the scope with single use devices as baskets to catch and relocate stones.
- To perform step by step techniques.
- To use laser in the different settings.

000PKB0X01

ImaJin[®]

Silicone double loop ureteral stents_

The remarkable biocompatibility and flexibility of silicone makes it the material of choice for long-term implantation: improved patient comfort* and less encrustation material compared to Polyurethane.

Duration of implantation: up to 12 months.

- Kit composition: each stent is supplied in a kit with a pusher (simple or steerable) and with or without a guidewire depending on the model. Ø Guide: 0.035".
- Steerable pusher: with or without radiopaque ring.
- Box of 1 (with a guidewire) Sterile.
- Box of 5 (without a guidewire) Sterile.

Vortek®

Double loop ureteral stents_

Soft outer layer for the patient comfort.

The double layer structure makes it easy to insert over the guidewire, the stiffness of each size has been adapted in order to keep the mechanical properties.

Kits with simple pusher Kits with

steerable pusher

Duration of implantation:

Vortek® hydro-coated

Double loop ureteral stents

Soft outer layer for the patient comfort. The double layer structure makes it easy to insert over the guidewire.

The hydrophilic coating facilitates the advancement of the stent.

• Kit composition: each stent is supplied in a kit with a pusher (simple or steerable), with or without a guidewire and with or without a Flush catheter depending on the model.

Ø Guide: 0.035".

Steerable pusher: with or without radiopaque ring.

- Box of 1 (with a guidewire) Sterile.
- Box of 5 (without a guidewire) Sterile.

Vortek® Tumor stents

Without eyes on the straight section_

The inner layer is reinforced compared to the standard Vortek ureteral stent. It allows passing through stricture and the stiffness of material offers an excellent resistance to compression.

- Kit composition: each stent is supplied in a kit with a steerable pusher (with radiopaque ring) and a guidewire. Ø Guide: 0.035" (hydrophilic nitinol guidewire).
- Box of 1 Sterile.

Soprano[®]

Exclusive Hybrid Design_

Soprano® is a guidewire with an exclusive hybrid design that combines the access of a nitinol wire with the handling of a PTFE-coated wire

Soprano[®]

The hydrophilic flexible tip reduces surface friction, and its round distal tip creates a lubricious surface for ease of insertion and navigation.

Soprano® Dual Flex

The Soprano Dual Flex features a flexible proximal end designed to ease passage and to minimize the risk of scope damage.

Order Ref.	Description	Diameter	Length	Tip shape	Tip style	Quantity

Titan® Touch

Inflatable penile implant_

3-pieces inflatable penile implant with hydrophilic coating and deflate button pump design.

- Touch pump: one touch of the deflate pads allows for easy deflation of the device.
- The Bioflex® material of the cylinders allows for unmatched cylinder strength and rigidity.
- Reduced risk of auto-inflation with Lock-out™ valve on the reservoir.
- Titan HydroVANTAGE™ hydrophilic coating is on all device components, including rear tip extenders and connectors. Physicians have the ability to choose the aqueous solution dip, tailored to the clinical needs of their patients.
- Zero Degree angle proximal base input tubing for ease of surgical placement.
- · Soft molded tip designed for suitable anatomic positioning.
- Individually packaged Sterile.

Altis®

Single Incision Sling System_

The Altis Single Incision Sling System is indicated for the treatment of female stress urinary incontinence (SUI) resulting from urethral hypermobility and/or intrinsic sphincter deficiency (ISD). It is an implantable, synthetic, knitted, macroporous, low-elasticity, monofilament polypropylene, single incision midurethral sling.

Aris®

Transobturator Kit_

A midurethral sling made from synthetic, knitted, low-elasticity monofilament polypropylene intended to be placed via the transobturator approach. The Aris sling is designed to support the urethra in the surgical treatment of female stress urinary incontinence. Aris Introducers are surgical instruments designed to facilitate the correct placement of the Aris Transobturator Sling.

Order Ref.	Description	Mesh size
UR3105	Aris [®] Transobturator kit Contents: 1 sling and 3 introducers	60 x 1.1cm
UR3101	1 Aris® Transobturator sling	60 x 1.1cm

Restorelle® Mesh_

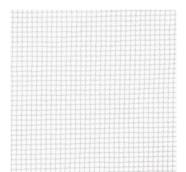

Restorelle mesh is a synthetic, macroporous mesh constructed of medical grade knitted, monofilament polypropylene. Restorelle L, XL and Y mesh are implanted transabdominally through an open abdominal, laparoscopic, or robot- assisted surgical approach.

Restorelle L (24cm x 8cm) and Restorelle XL (30cm x 30cm) are intended to provide anatomical support and suspension of the vaginal apex or uterine cervix or uterine isthmus, with or without uterus preservation (sacrocolpopexy/sacrocervicopexy or sacrohysteropexy).

Guarantee and conditions of use

Coloplast A/S - Guarantee and conditions of use

Without prejudice to your legal guarantee against all the consequences of defects or hidden defects, our commercial guarantee shall apply under the following conditions:

The duration of the normal guarantee of the products against defects in manufacturing workmanship and against defects in materials shall be a maximum of three months from the date of delivery (the "Warranty Period"), with the onus being on the Purchaser to prove the said defects.

Coloplast's guarantee shall be strictly limited to the products supplied and shall have as its sole effect the repair or replacement at the Company's expense and in its workshops of all those products rendered unusable as a result of defects. This is subject to Coloplast receiving written notice of the defect within 10 days from the date the defect was or should have been discovered by the Purchaser, within the Warranty Period. The return of the products must be done within the deadline communicated by Coloplast. Any return not respecting these conditions, cannot be the subject of an exchange. Products returned and replaced free of charge shall remain the property of the Company.

The guarantee shall not apply to replacements or repairs resulting from normal wear and tear of the products, to deterioration or accidents due to negligence, to any failure to respect the handling, transportation, storage or sterilization conditions, or to any failure to monitor, maintain or use the products correctly. EXCEPT AS STATED IN THIS GUARANTEE, THERE ARE NO OTHER EXPRESS, IMPLIED OR STATUTORY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

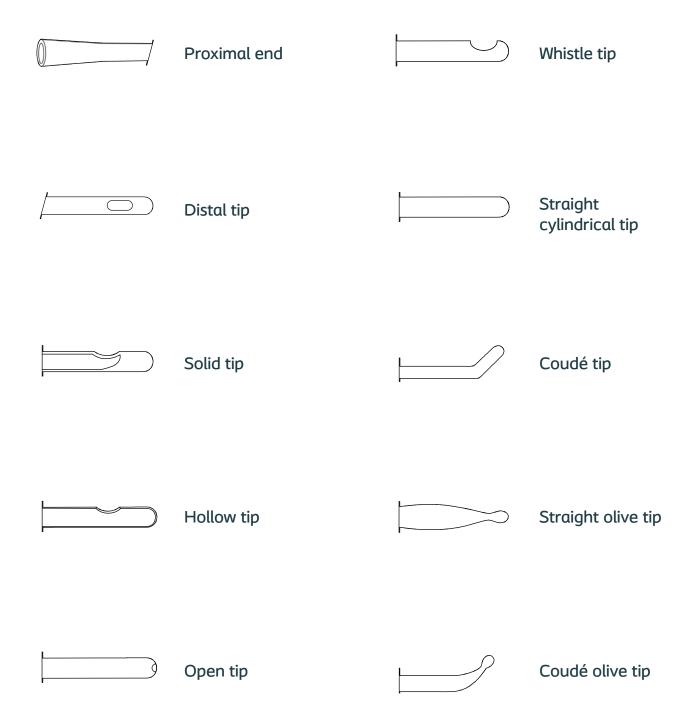

This guarantee shall not extend to any consequential or any other loss or indirect damage that may result from using a Coloplast product that has a manufacturing or material defect, whether for breach of any guarantee or warranty, for breach of any other term, or for ordinary negligence, unless it is shown from the circumstances of the defect that Coloplast has been quilty of gross negligence. The provisions of the United Nations Convention on the International Sale of Goods are expressly excluded from any purchase or sales contract of Coloplast products. Except as set forth in this paragraph, no compensation shall be payable by way of damages for any reason whatsoever. The storage conditions of the products shall be the sole responsibility of the Purchaser. We recommend that the products be stored in their original packaging with this packaging intact, away from light in a dry place, and at an ambient temperature.

The fact that a product is mentioned in this catalogue does not necessarily mean that it can be supplied. Committed to continually improving product quality, Coloplast reserves the right to make changes at any time, without notice, to its products, their specifications, packaging and presence in its range.

Contact your local representative for availability of the products in your country.

The purchase or use of our products implies acceptance of the general conditions of sale set out in the price list.

Terminology

Instrument gauges • The catheter gauges are: CHARRIERE: abbreviation «Ch/Fr» = 1/3mm MILLIMETER: abbreviation «mm» = 1mm GAUGE: abbreviation G. Gauge 14 = 1,63mm INCH: abbreviation "= 25,4mm

Material used

Coloplast uses various types of raw materials, depending on the various diagnostic or therapeutic indications for its devices.

The biocompatibility of the medical devices is in accordance to EN ISO 10993-1: 2020 Standard.

Before being used in manufacturing, raw materials are controlled in our laboratories batch by batch, using the control methods defined by our internal procedure.

All materials and components used by Coloplast are controlled and used in accordance with procedures and the requirements of standard EN ISO 13485: 2016.

The manufacturing processes depend on the material and include extrusion, injection or compression-molding, assembly and soaking.

We use two main types of material:

- Silicones
- Thermoplastics: Vortek[®], Biosoft[®], Neoplex, Polyamide, PVC and Polyurethane.

SILICONE: this is a flexible material with optimum biocompatibility. Silicone comes in different degrees of rigidity; it may be transparent, may contain radiopaque lines and may be opaque to X-rays.

After use, it degrades only to silica (sand) and water, with no chlorine or carbon derivatives. It is very stable over time.

VORTEK: An original formulation designed by Coloplast. The material is biocompatible; it comes in different degrees of rigidity and is opaque to X-rays. Mastery of the co-extrusion of this material has made it possible to produce dual-hardness JJs which are rigid in contact with a guide wire to facilitate glide and assembly, while having a flexible exterior for patient comfort.

BIOSOFT: a flexible biocompatible polymer which is particularly well tolerated by patients.

NEOPLEX: a specific formulation developed by Coloplast based on PVC and plasticizer.

POLYAMIDE (PA): particularly rigid material suitable for accessories such as funnels, tips, sheaths, etc.

PROLYPROPYLENE (PP): is a synthetic material made of macromolecules. It is low density and exhibits excellent mechanical properties over time, with a high level of chemical inertness and biocompatibility.

POLYVINYLCHLORIDE (PVC): a transparent polymer which may contain radiopaque lines and/or pigments.

It has been used for many years for the manufacture of various medical devices.

POLYURETHANE (PU): a material which does not contain plasticizer and which is very resistant, and with different range of elasticity available.
